DIRECTORS DIALOGUE

Dear Clients,

In the first few months of this year, BHD Storage Solutions has had an incredible start.

Having recently installed new racking systems, our clients can begin the new year with storage designed to maximise the amount of space they can utilise while still maintaining the highest quality standards that will enable them to operate their businesses more efficiently and effectively.

We celebrated the milestone at our third manufacturing plant with a formal ceremony attended by the construction team, engineers, and project managers, who are dedicated to ensuring the highest quality and safety standards are maintained throughout the construction process. A topping-out ceremony was attended by top executives, government officials, and other distinguished guests as the final steel beam was hoisted into place. As part of the topping-out ceremony, a number of speeches, cheers, and applause were heard, signalling the completion of the facility's structural framework and the beginning of the following phase of construction.

The facility is positioned to become a leading provider of high-quality storage solutions, demonstrating the company's commitment to excellence and ability to complete projects on schedule and on budget. The success of our third facility is a testament to our team's tireless efforts and dedication, and I wish our entire team continued success in the future.

The company's global footprint was showcased at the first BHD USA presentation at Promat in Chicago, IL. There were many visitors to our stand over the four days including customers, businesses, and installers who were interested in learning more about BHD. We have now set up a warehouse full of stock and are receiving and shipping orders on a daily basis.

The BHD AUS team is excited to share that we have registered to exhibit at CeMAT in Sydney from 25-27 July 2023. You will be able to experience the range of logistic and warehousing solutions and technologies setting industry standards and defining the future at CeMAT Australia. We will be located on stand H31 during the event.

We are also pleased to report that BHD was one of the sponsors of the VIC Cancer Council Casey Relay For Life fundraiser in support of one of our dear colleagues, Charlie, who has been suffering from mutable myeloma. As the name implies, this is a type of blood cancer that attacks the blood plasma that makes up the bone marrow. The disease would have been terminal if it had not been detected or treated. Our team raised \$3,223 and we have included images from the event in our newsletter. A big thank you goes out to our generous donors and the incredible BHD team spirit for making this possible.

Sincerely,

Jessica Zhu
Managing Director

PROJECT DELIVERY

MILLS GROUP - CRANBOURNE WEST VIC

The Mills Group saw an opportunity to expand its business operations by investing in a larger workspace, allowing them to take on more clients and increase its capabilities.

The newly built 7,800 sqm warehouse space provides them with the capacity to take on larger orders and also allows more flexibility with their product offerings.

The warehouse was designed with an efficient layout to provide quick, easy access to all of the stored items. The system was also designed to facilitate the quick delivery of goods when necessary.

Working together, the rack installers and builders were able to share resources, coordinate schedules, and ensure timelines were met. This resulted in the project being completed on schedule and on budget. This allowed the Mills Group to move forward with their plans, giving them the opportunity to capitalise on the expanding market in Victoria.

The racks have been designed with a wider aisle clearance to simplify access and visibility and improve safety for both operators and the goods stored. Featuring 5,430 pallet locations on high-quality steel racks, and 3810mm bays of tunnel racks with galvanised mesh decks to allow for better lighting, airflow, and easier access to stored items.

The project was successfully completed due to the diligent work and collaboration of the teams and partners.

PROJECT DELIVERY OXWORKS - EPPING VIC

In a recent project, one of our valued national fence clients Oxworks enlisted BHD for the design, supply and installation of a brand-new facility. They required solutions for storing a wide range of fencing products in order to optimise their warehouse space.

BHD Storage Solutions designed a system that would meet all of their needs - installing 832 pallet racking positions, 99 metres of double-sided cantilever racking, as well as longspan shelving.

We have been working together on a variety of projects for many years, and our client is extremely satisfied with the results and the smooth delivery of projects.

Having worked with Oxworks on different projects in the past, we are looking forward to more in the future. They have several new sites in the pipeline for us to design solutions based on their requirements as they grow.

PROJECT DELIVERY CORYYONG BUILDING SUPPLIES & NURSERY & ROCKPRESS

In response to business growth, **Corryong Building Supplies & Nursery** requested racking to accommodate storing vast quantities of long and heavy products such as timber packs. The first step was to install cantilever racking. This is ideal for storing difficult and long items as it doesn't have front uprights getting in the way of placing and retrieving loads. The products are stored horizontally on the arms and handled using forklifts. BHD installed double-sided cantilever racking to maximise storage capacity. On-time and within budget, the installation was completed and the client was very satisfied with the result. A great way to get the store up and running in 2023.

Another project we worked on was designing a custom cantilever rack system for **Rockpress**.

In addition to meeting their unique storage requirements, this project was designed to allow Hubtex Australia side loaders to access it.

The client needed to store long sheet metal on both single-sided and double-sided cantilever racks. The yellow cantilever arms were customised to hold up to 300kg, while the green arms were to hold up to 700kg.

In accordance with the client's request, coloured arms would make it easier for the loaders to identify the different weights.

The cantilever racks were capable of handling sheets that ranged in size from 7m x 2.6m to 7m x 1.6m.

BHD'S 3RD GLOBAL FACILITY IS UNDER CONSTRUCTION

One of the most Intelligent Rack Systems in the world will be sourced from our third global facility.

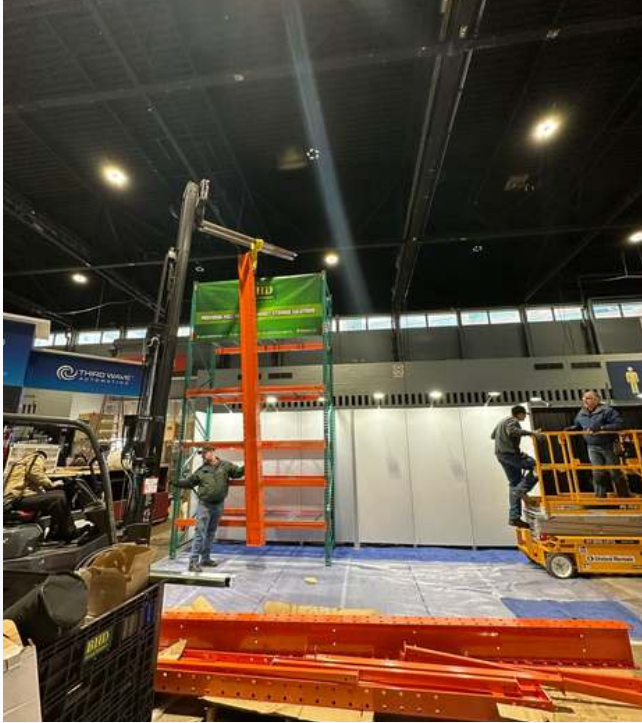

Approximately \$100 million USD has been invested in the construction of the 65,000 sqm facility, with manufacture starting in mid-2023. Our new facility will manufacture one of the world's most intelligent racking systems for clients worldwide.

This advanced technology-based storage systems maximises the use of space and increases the efficiency of material handling operations.

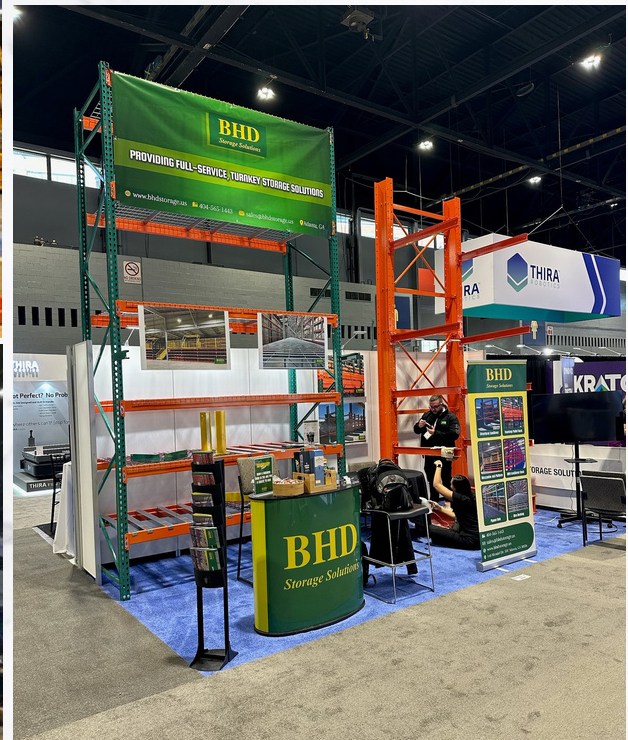

Intelligent racking is an innovative solution that can help companies reduce their storage footprint, increase operational efficiency, improve inventory management and minimise the risk of errors. Stay tuned for an update on this exciting development in the next issue.

BHD USA EXHIBITS AT PROMAT Chicago, IL

As the company expands its global footprint, BHD USA exhibited its storage systems at Promat in Chicago IL for the first time. Over the course of the four-day event, many business owners, developers, and installers visited our stand to learn more about BHD. Our warehouse is fully stocked, receiving and shipping orders on a daily basis, so we are pleased to announce we are now fully operational.

Over the years, BHD Storage Solutions has assisted hundreds of businesses in achieving success through its quality rack systems. You may want to consider leveraging our expertise for your own success.

WHEN IT COMES TO SPACE EFFICIENCY, MOBILE RACK IS A GOOD CHOICE.

Nowadays, many businesses face ongoing challenges regarding space efficiency and cost-effectiveness. Space constraints or lack of storage space are major challenges in designing an efficient rack system. In addition, it is important to keep track of materials and documents. A cluttered rack system in a cramped space may lead to increased downtime and breakages. It may even create safety issues for workers. Despite all these challenges, it may not always be possible to physically increase storage area. Freeing up some space may be a quick fix but not a long-term solution. This is where a mobile racking system can be useful for improving workplace accessibility and productivity and keeping storage space clutter-free.

In this system, storage racks are mounted onto carriages on motor-driven wheels for better portability. Mobile shelving ensures that only those with authorised access can reach the product. It is safe and convenient for workers to move the materials in and out of the warehouse.

Designed by BHD's leading structural engineers, with features that meet all standards including, but not limited to, stability, strength, and load-bearing capacity. Our uprights, beams, frames, and connectors are made from high-quality, high-tensile steel and ensure outstanding safety. This ensures that our racking can withstand even the harshest conditions and is safe for workers to use.

Safety Features of BHD's Mobile Racking Systems:

- Multiple light sensors ensure mobile racks can only be operated when aisles are completely clear.
- On each mobile racking system, a stop button is fitted to the front, along with circuit breakers to protect the electrical circuits.
- In the event of a trip bar being activated, the motors will be cut off and the mobile rack will come to a controlled halt.
- The aisles must be clear of anyone, materials, handling equipment, and stock before they can be operated.

BHD invests continuously in product development for reliable racking components. Our products are rigorously tested and meet the highest quality standards. We use cutting-edge technology to manufacture our products, and our team of experts constantly develops effective ways to improve their quality and safety. This allows us to guarantee a longer life cycle and better performance for our customers.

You can contact us to find out how we can help you make the most of your storage space.

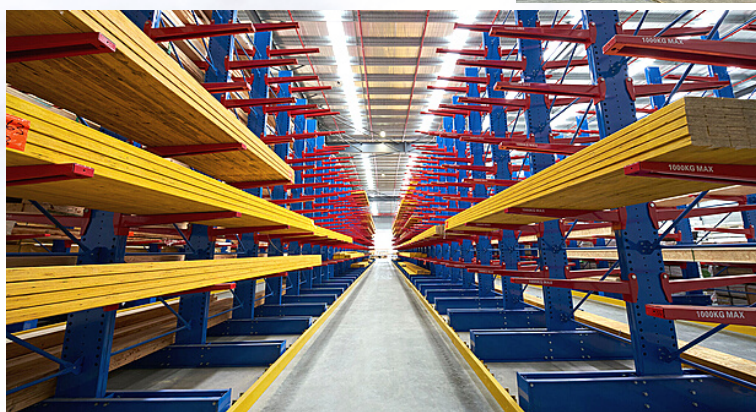

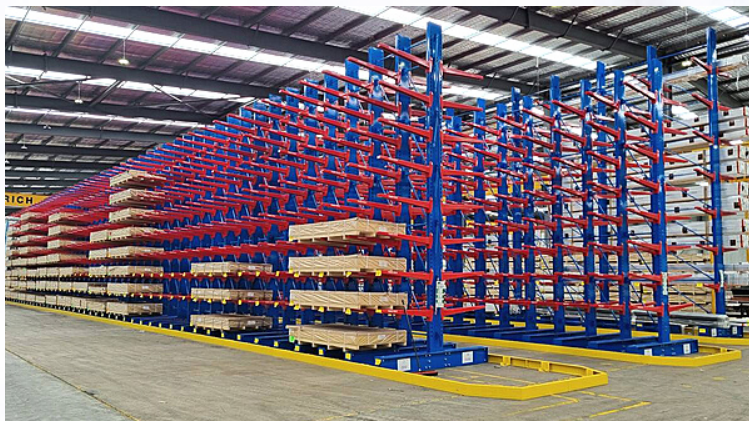

LOOKING FOR STORAGE SYSTEMS THAT ARE TAILORED TO YOUR NEEDS?

BHD's advantage lies in its ability to provide smart storage solutions based on its rich history and experience. The specialised space-saving systems offered by BHD can be customised to suit every warehouse storage requirement.

Providing outstanding service and design consultation to businesses has enabled BHD to ensure long-term success and a reliable storage system. Working with us means you get a dedicated team of experienced professionals with a can-do attitude who take pride in their work and prioritise product safety.

We're committed to providing you with world-class storage solutions that are precisely designed, manufactured, and operate in compliance with all relevant safety standards and regulations.

2023 CASEY RELAY FOR LIFE

With 20 years behind them, Casey Relay For Life has built a family and we were honoured to participate this year as one of the sponsors. Casey's efforts benefit the Cancer Council, and this year's 20th anniversary was particularly special.

As we all know, the last few years have been difficult. Nevertheless, the Cancer Council was able to work on research, support programs, and help many people who were dealing with cancer.

As one of the sponsors of Relay For Life, BHD supported our work colleague Charlie Grant who was diagnosed with Mutable Myeloma, a blood cancer of the bone marrow. It would have been terminal if it had not been detected and treated. Early diagnosis is key to a successful treatment program. Charlie is now feeling much better after his surgery and 100 days of isolation. We're so happy to see him recovering well in the company of his family and friends.

This fundraising event wouldn't have been possible without the unwavering dedication of the Casey Relay For Life committee, volunteers, generous sponsors, teams, and donors.

We are deeply grateful to each and every one of you and look forward to seeing everyone at Casey Relay For Life 2024!
